

The Central American Waterbird Census

EC Contract No. 3000631213

Deliverable 2: Final report of the Central American Waterbird Census

31 March 2017
WHSRN Executive Office - Manomet

Introduction

The Central American Waterbird Census (CAWC) was launched in 2011 by the Waterbird Conservation Council in coordination with Wetlands International and BirdLife International. The census forms part of the International Waterbird Census (IWC), a program of Wetlands International that was first established in Europe in 1967 and since the 1990s has also covered Africa, Asia and South America. The goals of the IWC are to monitor changes in waterbird numbers and distribution; to improve knowledge of little-known waterbird species and wetland sites; to identify and monitor sites that qualify as Wetlands of International Importance under the Ramsar Convention on Wetlands; to provide information on the conservation status of waterbird species; and to increase awareness of the importance of waterbirds and their wetland habitats at local, national and international levels.

Ever since the initiation of the CAWC in 2011, the census has gradually been growing in significance, both in terms of the sites and species surveyed, and the number of volunteer participants across the seven countries. Regional coordination was initially led by BirdLife International, but most recently by the Fundación Ecológica SalvaNATURA (El Salvador). In the current year, the WHSRN Executive Office assumed regional coordination.

This report presents a summary of the results of the Central American Waterbird Census conducted in February–March 2017.

Methodology

The CAWC has been implemented following the methodology of the Neotropical Waterbird Census. Lead organizations in each Central American country were contracted to coordinate and undertake the census, and were asked to define key sites for the census and encourage census participants to undertake at least one waterbird census at a key wetland site. Key wetland sites are considered to be Ramsar site, wetland Important Bird Areas (IBAs), wetlands Protected Areas or WHSRN.

Data were collected on slightly modified versions of the two standard NWC forms, and three options were provided for submitting the data: via the national coordinating organizations, to the e-mail address censo.avesacuaticas.ca@gmail.com, or via eBird <http://ebird.org/content/ebird> (in which case participants were asked to add “Central American waterbird census” to the note section).

Participation

National Coordination

The following organizations were sub-contracted by the WHSRN Executive Office as national census coordinators:

Belize - Belize Audubon Society

Costa Rica - Unión de Ornitólogos de Costa Rica (UOCR)

El Salvador – Fundación Ecológica SalvaNATURA

Guatemala - Fundación para el Ecodesarrollo y la Conservación (Fundaecon)

Honduras - Asociación Hondureña de Ornitología

Nicaragua – Quetzalli Nicaragua S.A.

Panama - Sociedad Audubon de Panamá

Participating organizations

In most of the participating countries, other organizations also took part in the waterbird census. In Costa Rica, the UOCR teamed up with the National Museum of Costa Rica, which, in the past, has coordinated the waterbird census in Costa Rica. In El Salvador several local and national authorities joined the census, including the Municipalities of San Dionisio, Usulután and the Bahía de Jiquilisco; the National Police; the Environmental Division of the Armed Forces; and the Ministry of Environment and Natural Resources. FUNDAECO in Guatemala carried out the census with help from the Avitourism Association and Belize Audubon Belize Audubon was assisted by members of the Scarlet Six-biomonitoring team. In Honduras several bird observation clubs participated in the census, including Club Zorzales, Club Cotinga and Club Chlorofonias.

Participants

A total of 150 people participated in the census, with most participants in Panamá, Nicaragua, Honduras and El Salvador (Table 1).

Table 1: Number of volunteers and institutions participating in each country

Country	No. participants
Belize	15
Costa Rica	12
El Salvador	26
Guatemala	7
Honduras	30
Nicaragua	30
Panamá	30
Total	150

Results

A total of 152 sites and sub-sites were visited in the seven participating countries of Central America. A total of 111 waterbird species were recorded and 229.241 individuals counted. The country with the highest numbers, both regarding number of species and total individuals, was El Salvador where a total of 73.606 waterbirds of 78 different species were recorded. Also, high counts of waterbirds were observed in Costa Rica (52.801 individuals; 71 species) and Panama (50.375 individuals; 54 species). Table 2 presents a summary on the basic results per country.

Table 2: Summary of the Central American Waterbird Census results per country

Country	No. Sites	No. Species	No. Individuals
Belize	17	64	3055
Costa Rica	25	71	52801
El Salvador	45	78	73606
Guatemala	23	70	7436
Honduras	9	64	8648
Nicaragua	28	77	33327
Panamá	5	54	50375
Totals	132	111	253,568

Of the 152 sites visited during the waterbird census, 21 have been declared as Important Bird Areas (IBA)s, 11 are Ramsar sites and two sites are part of the Western Hemisphere Shorebird Reserve Network. Nine of these sites are recognized as both a Ramsar site and IBA, while the Upper Bay of Panamá is a WHSRN site and an IBA and Ramsar site.

Comments on sites

Most sites were surveyed in El Salvador, where a total of 45 were visited for the waterbird census (Table 3). Of these 45 sites, most waterbird were counted at Laguna de Olomega (15,505 individuals) and Laguna El Jocotal (13,347 individuals), both IBAs. The site where most waterbirds was recorded was Zona de Reserva Marino-Costera los Manglares de Panamá Viejo in Panama where a total of 26,999 waterbird were counted. Another site with a count over 20,000 waterbirds was Embalse Sandillal in Costa Rica where 26,807 waterbird were counted. Other noteworthy sites with high counts of waterbirds included the Delta Estero Real in Nicaragua (18,430 individuals) and Costa del Este in Panama (Upper Bay of Panama, 18,998 individuals).

Sites with a high diversity of species included Finca Tamashan-Guamuchal in Guatemala and Delta Estero Real in Nicaragua with 45 and 44 species respectively. High numbers of species were also recorded at Cerrón Grande (El Salvador), El Paredón (Guatemala) and Playa San Carlos (El Salvador) with 37, 36 and 35 species respectively. A summary of the counts for each site is presented in Table 3.

Table 3: Summary of species and individuals recorded at each site during 2017 CAWC

Country	Site	Site status	Total species	Total count
Belize	Gra Gra Lagoon (Wetlands and Beach) - Dangriga Town	IBA (BZ004 - Belize Coastal and near shore islands)	34	320

Comments on species

The total of 111 species recorded in the seven countries (see Table 4) included 38 resident species, 56 Nearctic migrants, 14 species with both resident and migratory populations, one considered a vagrant (*Podiceps nigricollis*) in the region and one of uncertain status (*Laterallus jamaicensis*).

Nearctic Migrants

Of the Nearctic migrants, excluding shorebirds, the most abundant was *Anas discors* with a total of 42,146 individuals recorded, the majority (27,533) in Costa Rica. Another Nearctic migrant to Central America recorded in high numbers was *Thalasseus sandvicensis*. A total of 18,379 individuals were counted, mostly in Panama (17,428 individuals). Other species recorded in high numbers included *Aythya affinis* (8504 individuals), *Leucophaeus atricilla* (9289 individuals) and *Fulica americana* (6399 individuals)

A total of 29 species of Nearctic shorebirds were recorded, totaling 48,565 individuals. An additional 26,723 individuals were recorded but not identified, including 26,609 *Calidris* sp. and 114 *Limnodromus* sp. Combined, a total of 75,288 Nearctic shorebirds were counted in the region during the census, representing 33% of all waterbirds counted.

The most common species of shorebird were *Calidris mauri* (12,479 individuals), *Calidris pusilla* (9693 individuals), *Tringa semipalmata* (5652), *Charadrius semipalmatus* (4104 individuals), *Calidris minutilla* (3648 individuals), *Pluvialis squatarola* (2572 individuals) and *Limnodromus griseus* (2260 individuals).

Resident Waterbirds

The number of resident waterbirds and waterbirds with both resident and migratory populations recorded region was lower than that of Nearctic migrants. A total of 27,094 individuals considered resident and 21,380 considered resident and migratory were counted. Of the resident species the most abundant were *Dendrocygna autumnalis* and *Phalacrocorax brasiliensis*, with 10,057 and 8041 individuals respectively. Of the species with both migratory and resident populations the most common were *Himantopus mexicanus* (5874 individuals) and *Charadrius wilsonia* (3995 individuals).

Table 4: Waterbird species recorded during the 2017 Central American Waterbird Census.
 (Status: R= resident; M= Nearctic Migrant; ? = status unclear)

Scientific name	Species	Total	No. countries	Status
<i>Dendrocygna autumnalis</i>	Black-bellied Whistling-Duck	10.057	7	R

<i>Sterna hirundo</i>	Common Tern	48	2	M
<i>Thalasseus maximus</i>	Royal Tern	5.567	7	M
<i>Thalasseus sandvicensis</i>	Sandwich Tern	18.379	7	M
<i>Thalasseus elegans</i>	Elegant Tern	99	4	M
<i>Rynchops niger</i>	Black Skimmer	2.509	4	R & M
<i>Jabiru mycteria</i>	Jabiru	7	2	R & M
<i>Mycteria americana</i>	Wood Stork	985	7	R
<i>Fregata magnificens</i>	Magnificent Frigatebird	865	7	R & M
<i>Sula nebouxii</i>	Blue-footed Booby	14	1	R

<i>Sula leucogaster</i>	Brown Booby	108	3	R
<i>Phalacrocorax brasilianus</i>	Neotropic Cormorant	8.041	7	R
<i>Phalacrocorax auritus</i>	Double-crested Cormorant	12	1	M
<i>Anhinga anhinga</i>	Anhinga	145	7	R
<i>Pelecanus erythrorhynchos</i>	American White Pelican	1.290	5	M
<i>Pelecanus occidentalis</i>	Brown Pelican	2.326	7	R & M
<i>Botaurus pinnatus</i>	Pinnated Bittern	4	1	R
<i>Ixobrychus exilis</i>	Least Bittern	4	2	R & M
<i>Tigrisoma mexicanum</i>	Bare-throated Tiger-Heron	80	7	R
<i>Ardea herodias</i>	Great Blue Heron	460	7	M
<i>Ardea cocoi</i>	Cocoi Heron	4	1	R
<i>Ardea alba</i>	Great Egret	2.390	7	R & M
<i>Egretta thula</i>	Snowy Egret	2.006	7	R & M
<i>Egretta caerulea</i>	Little Blue Heron	1.254	7	M
<i>Egretta tricolor</i>	Tricolored Heron	537	7	R & M
<i>Egretta rufescens</i>	Reddish Egret	57	5	R & M
<i>Bubulcus ibis</i>	Cattle Egret	956	7	R
<i>Butorides virescens</i>	Green Heron	365	7	R & M
<i>Butorides striata</i>	Striated Heron	10	2	R
<i>Agamia agami</i>	Agami Heron	3	3	R
<i>Nycticorax nycticorax</i>	Black-crowned Night-Heron	80	7	R & M
<i>Nyctanassa violacea</i>	Yellow-crowned Night-Heron	321	7	R & M
<i>Cochlearius cochlearius</i>	Boat-billed Heron	51	4	R
<i>Eudocimus albus</i>	White Ibis	2.351	7	R
<i>Plegadis falcinellus</i>	Glossy Ibis	221	5	M
<i>Mesembrinibis cayennensis</i>	Green Ibis	10	2	R
<i>Platalea ajaja</i>	Roseate Spoonbill	638	7	R

Final comments

This year's results show that the Central American Waterbird Census is becoming a well-established program, with a growing number of participants and expanding coverage of sites.

The large number of Nearctic migrants recorded emphasizes the importance of the census as a tool for monitoring their populations.

Appendix 1. Species totals per country during the 2017 Central America Waterbird Census

Scientific name	Belize	Guatemala	El Salvador	Honduras	Nicaragua	Costa Rica	Panamá	Total
<i>Dendrocygna autumnalis</i>	153	15	4739	23	993	2829	1305	10057
<i>Dendrocygna bicolor</i>			893	140	77		6	1116
